

## Waste Control on Building Sites

Windblown rubbish from building construction sites within the Town of East Fremantle has been the cause for complaint from nearby residents for some time.

Builders have a responsibility to ensure airborne litter is contained on site and not causing problems for adjoining owners.

The Town's Waste Local Law 2017 specifically requires that on every building construction site, the builder shall ensure that:

- An appropriate refuse receptacle is provided on site for the duration of the construction work;
- All building work waste is deposited and kept in the receptacle; and
- The lid of the receptacle is kept closed except when waste is being deposited in the receptacle.

The Town considers that the minimum standard for an appropriate receptacle would be a capacity of no less than 4 cubic metres.

**Penalties apply for non-compliance with the Town's Waste Local Law 2017**
