

Integrated Traffic Management & Movement Strategy

The Town of East Fremantle appointed Cardno Pty Ltd to prepare an **Integrated Traffic Management & Movement Strategy** (the 'Strategy').

The Strategy provides detailed information to enable the Town to better plan and progress future budgeting requirements for relevant capital and/or other work and outputs.

It evaluates the current transport network against future projected population growth, new developments and needs predictions, to facilitate an effective and efficient transport system.

Overall Strategy

The following three Plans underpin the Strategy.

The Strategy provides a summary of the key findings and recommendations of each of the Plans to enable the Town to prioritise future capital works projects.

Specifically, the Strategy comprises:

- A Parking Management Plan;
- A Traffic Management Plan; and
- An Active Transport Plan.

The Strategy is nearing completion and it is expected to be advertised for public comment in coming months. To ensure effective consultation is undertaken, a Community Engagement Plan is being prepared to ensure residents, ratepayers and relevant stakeholders have the opportunity to provide feedback.

Strategy One - The Parking Plan

This Plan provides information about existing parking demands and investigates options for enhancing residential and commercial parking within the Town. It will identify possible locations for potential new parking areas and provide, recommendations for upgrading and better utilising existing parking areas. Existing constraints and future opportunities for parking will be explored.

Strategy Two – Traffic Management and Movement Plan

This Plan takes into consideration current traffic movements and flows; looks to create efficiencies in vehicular, cycle and pedestrian movement; and looks at the potential impacts of future large scale residential developments such as the Royal George Hotel, Leeuwin Barracks, and the Roofing 2000 site. It will provide a short to long term outlook of traffic issues in the area, taking account of predicted growth in the population.

Strategy Three – Active Transport Plan

The aim of the Active Transport Plan is to provide details on how to maximise the safe movement of pedestrians and cyclists throughout the Town, recognising the barriers to connection, for example across Canning and Stirling Highway and developing strategies and plans to minimise these and any other constraints. This too will consider the potential impacts of future large scale residential developments such as the Royal George Hotel, Leeuwin Barracks, and the Roofing 2000 site.
